

## Application for student license, Aarhus Workbench

Aarhus Geophysics Aps wishes to support the science and by giving low cost-price licenses for our software programs we hope to assist young scientists to a better workflow with their data.

In general, the GIS components of the program come at cost price of approximately 200 EUR covering handling of the license, and hardware key. The inversion modules come at 50 % discount of the sales price. But tell us more about your project, and we can discuss further.

The SiTEM/Semdi package also comes at cost price of 200 EUR.

Please fill out this form and return it to Aarhus Geophysics ([sales@aarhusgeo.com](mailto:sales@aarhusgeo.com)) to obtain a license for the Aarhus Workbench and/or SiTEM/Semdi.

The license is personal for a single user and must be used exclusively for non-commercial, scientific purposes in connection to ongoing studies at a recognized university. Licenses are time limited to 1 year, which can be extended until the end of the course. When the studies are finished the license terminates and all copies of the program must be destroyed and the hardware key returned.

We hope that you will find our programs useful in your research.
